

Instructions for Running the Grade Book

Open the `jkrovitz_final_project` folder in a Python text editor or IDE of your choice.

To interact with the grade book itself, run the file `grade_book.py`. From there, it is a user input-based program, and the directions on screen will guide the user.

To run the tests, please run the `Student.py` file. The message "All tests passed!" will be printed indicating all the unit tests have passed.

The `custom_error.py` file contains custom error message classes that are used in `grade_book.py` for various except block errors. Running the `custom_error.py` file will not produce any output.
